KUKA

Industrial robotics_**heavy payloads**

EN

Giving you the power to succeed

KUKA robots for heavy payloads from 360 kg to 1,000 kg

Where complex work sequences with high loads are involved, KUKA robots for heavy payloads give your business decisive productivity advantages. They master the reliable handling and processing of large and heavy parts, the linking of work processes, the tending of machines, and palletizing.

Special variants adapt KUKA robots for heavy payloads ideally to your individual requirements. In the heat-resistant Foundry design, for example, they keep a cool head even in high temperature ranges.

Linkage of four machining centers with KR FORTEC Foundry

_Productive

_Streamlined

_Low maintenance

_Versatile

Productive. Pose repeatability of ±0.08 mm and arm extensions up to 500 mm ensure reliable production quality.

Powerful. High payload capacities up to 1,300 kg enable the handling of heavy workpieces.

Flexible. A Choice of floor-mounted or ceiling-mounted versions allows optimal use in customized cell concepts.

Versatile. Broad product spectrum, with heat-, dust- and water-resistant variants, provides high adaptability to all ambient conditions.

Streamlined. The reduced space requirements and low disruptive contours allow significantly more compact cell concepts in the heavy payload range.

Low maintenance. KUKA robots offer the longest maintenance intervals on the market at around 20,000 operating hours, thus ensuring maximum productivity.

KR 360 FORTEC

Productive. Pose repeatability of ±0.08 mm and arm extensions up to 500 mm ensure reliable production quality.

Powerful. High payload capacities up to 360 kg.

Flexible. A choice between floor-mounted and ceiling-mounted versions allows optimal use in customized cell concepts.

Versatile. Broad product spectrum, with heat-, dust- and water-resistant variants, provides high adaptability to all ambient conditions.

KR 500 MT FORTEC

Versatile. Precise versatility of motion of the jointed-arm industrial robot, even in the case of process forces of up to 8,000 N.

Powerful. Ideally suited to the milling of heavy and hard materials and other processes with application of strong forces, e.g. friction-stir welding, drilling or riveting.

Long reach. Reaches of up to 3,326 mm.

Flexible. Foundry or Milling variants available.

KR 1000 titan

Fast. High speed and dynamic acceleration allow short cycle times.

Expandable. Wide range of applications with KUKA peripheral equipment, e.g. linear axes.

Productive. Minimal disruptive contours allow positioning close to the application effectively increasing the usable workspace.

Efficient. Higher robot accuracy means greater manufacturing quality, less scrap, lower production costs, and thus greater efficiency.

Easy to integrate. Simple integration into plants and systems, adaptation of foundations is not required. Saving additional investment costs.

KL 4000

Flexible. Long travel of up to 30 m extends the work envelope by several times the reach of the robot. Ideal for linking production lines.

Powerful. Higher performance and energy efficiency due to the reduced mass of the beam and the carriage.

Modular. Thanks to the modular design of the linear unit, the length can be altered as desired using standard components.

Positionally accurate. Up to four robots can be operated on a linear axis. Multiple robot positions on the linear axis allow optimal adaptation to existing requirements and workspaces.

Greatly simplified installation. Since no welding work is required during installation of the linear unit, installation is significantly faster. There is no need for a welding certificate for the hall or for specialist welding personnel.

Linear unit	KL 4000
Max. Number of carriages	4
Rated payload	4,000 kg
Maximum velocity	1.89 m/s
Pose repeatability	<±0.02 mm
Number of axes	1
Variant	S
Mounting position	Floor, ceiling
Mass of carriage	508 kg
Mass of beam per meter	235 kg
Minimum rated travel	0.4 m
Maximum rated travel	30.4 m
Gradation of rated travel	0.5 m
Transmission of force	Rack

Operating conditions

Ambient temperature	+10 °C to +55 °C

Controller	KR C4

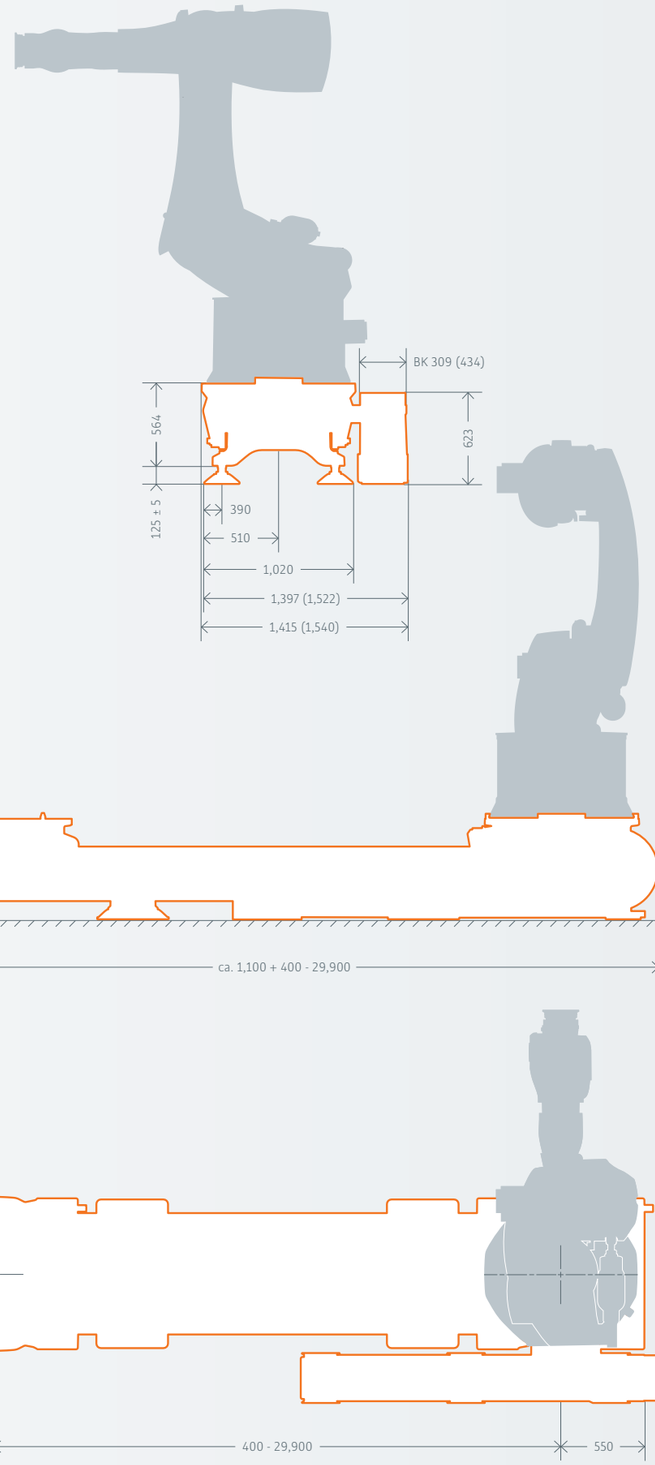
Compatibility Robots of the high an heavy payload category (90 to 600 kg)

KR 300 PA, KR 470 PA, KR QUANTEC series, KR FORTEC

S Speed



KL 3000

Flexible. Long travel extends the work envelope by several times the reach of the robot.

Powerful. Works quickly and precisely, with maximum payload and robustness.

Versatile. A protective cover is available for keeping out dirt during tasks in harsh environments.

Positionally accurate. Up to two robots can be operated on one linear axis. Multiple robot positions on the linear axis allow optimal adaptation to existing requirements and workspaces.

Specially for heavy payloads. This linear unit is suitable for robots with a payload from 700 to 1,300 kg.

Linear unit	KL 3000
Max. Number of carriages	2
Rated payload	6.500 kg
Maximum velocity	1,45 m/s
Pose repeatability	<±0,02 mm
Number of axes	1
Variant	CV
Mounting position	Floor
Mass of carriage	2,500 kg
Mass of beam per meter	720 kg
Minimum rated travel	0.8 m
Maximum rated travel	29.8 m
Gradation of rated travel	500 mm
Transmission of force	Rack

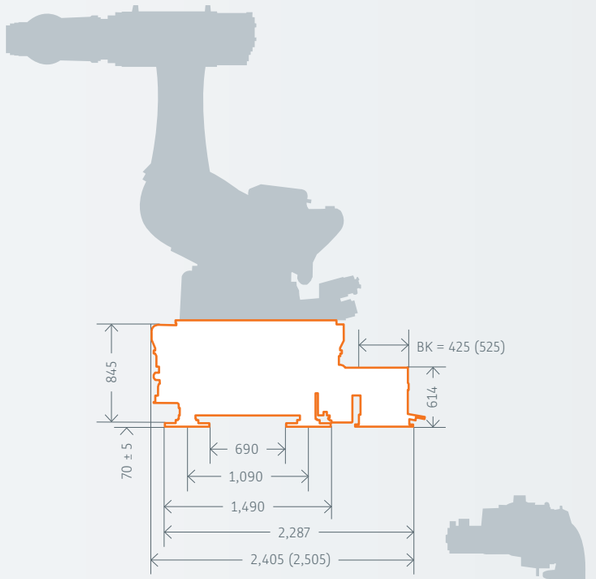
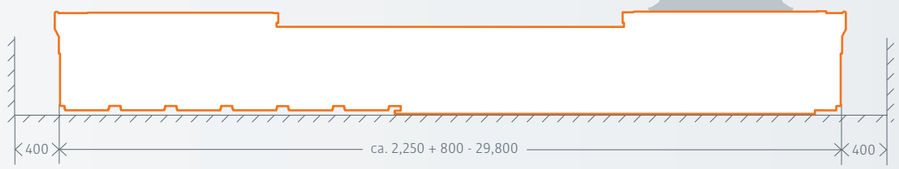
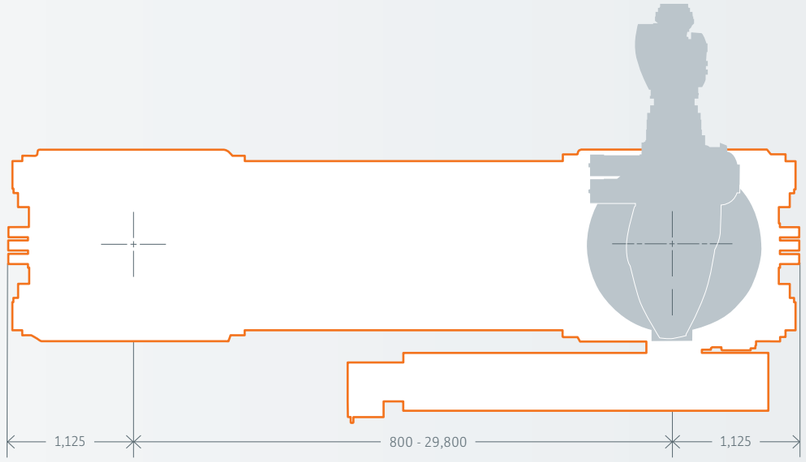
CV Covered







Faster as a team

No matter which robot you opt for KUKA offers you the matching system components. KUKA robots embody all the essential characteristics of future-oriented robot technology. KUKA robots are more reliable and more flexible than ever with the ability to master heavy loads and long reaches with extreme precision. Thanks to an outstanding availability of nearly 100 %, KUKA robots make the automation processes easier than ever before.

Safer as a team

KR C4 – the control system of the future. More powerful and safer, with more flexibility. Its open architecture can manage all kinematic systems and even complete production lines. The KR C4 provides a firm foundation for the automation of tomorrow. This significantly reduces your costs in automation for integration and maintenance. At the same time the long-term efficiency and flexibility of the systems are increased. The KR C4 gives you the necessary openness to meet the requirements of tomorrow's markets.

Simpler as a team

The simplest way of operating robots. Touch screen. Graphics support. Flexible interaction. The large touch screen of the KUKA smartPAD allows operation of both robots and entire systems, all visually represented on the screen. The display adapts to show the user only those operator control elements that are needed at any given moment. Attention is always focused on what is important, allowing users to work more intuitively, quickly, easily and efficiently.

More versatile as a team

An optimally prepared, efficient software solution for every task. KUKA function and technology packages breathe life into the KUKA robots. They enable them to carry out particular industry-specific functions within an automation solution. Gluing, moving, machining, measuring, handling or working together with humans or other synchronized robots: KUKA function and technology packages make automation easy.

99.995 % availability

Robust and low on maintenance, this unbeatable team works non-stop on your success.

KR C4
The control system of the future

More powerful, safer, more flexible, and more intelligent. The KR C4 has been created for the automation of today and tomorrow. Thanks to its open architecture it is a master of simple integration. It can communicate in a wide range of programming languages and is ideally suited to the control of KUKA manipulators. It can carry out a vast range of tasks, be used for robots of all payload categories, and control entire production lines. With the KR C4 all integrated controllers, SafetyControl, RobotControl, MotionControl, and LogicControl have a joint database and infrastructure for maximum performance, scalability, and flexibility.

_±0.002 sec I/O response time

_Universal application

_For all payloads

_Allrounder

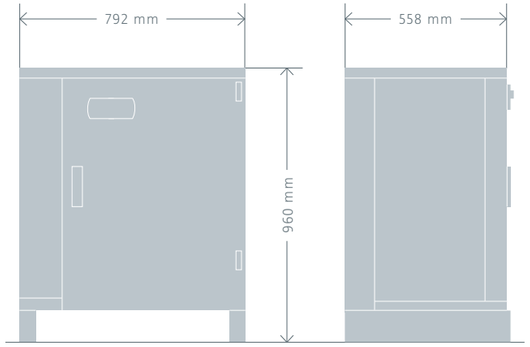
_Energy-efficient

_Communication talent

_Robustness

Increased system availability through systematic reduction of hardware, cables and connectors

The passive heat exchange system, with separate air circulation in the inner and outer zones of the controller, allows low-maintenance operation even in dusty environments. Entirely without filter mats.



Allrounder. Safety, Robot, Logic and MotionControl – the KR C4 combines everything in a single controller allowing effortless control of the entire system.

Universal application. The open architecture of the KR C4 can control not only KUKA robots but also external axes – for maximum flexibility, scalability, performance and openness, in minimum space.

For all payloads. The KR C4 is the uniform controller for all KUKA robots, ranging from the low to high payload range categories.

Communication talent. In addition to its own robot language KRL, the KR C4 understands the language of the CNC machining world (G-code) and the language of PLCs, enabling it to communicate directly with your Siemens® or Rockwell® controller.

Robustness. The consistent choice of durable components and well-designed cabinet ensure long-term, reliable operation, even in extreme conditions.

±0.002 sec I/O response time. Secure data exchange measured in milliseconds forms the basis for new safety concepts in human-machine cooperation.

Energy-efficient. The new energy management system allows the energy consumption of the controller to be reduced by up to 95 % [1] in standby mode. The improved cooling concept, combined with a temperature-controlled fan, further reduces the power dissipation of the controller, while making operation considerably quieter.

KR C4 controller

Dimensions (H x W x D)	960 x 792 x 558 mm
Processor	MultiCore-technology
Hard drive	SSD
Interface	USB3.0, GbE, DVI-D, Display Port
Number of axes (max.)	9
Protection rating	IP 54
Weight	150 kg

Power supply connection

Mains frequency	49 to 61 Hz
Rated supply voltage	AC 3 x 208 V to 3 x 575 V
w/o transformer	AC 3 x 380 / 400 / 440 / 480 V
Permissible tolerance of rated voltage	-10 to +10 %
Mains-side fusing	min. 3 x 25 A slow-blowing, max. 3 x 32 A slow-blowing

Operating conditions

Ambient temperature	+5 °C to +45 °C
Ambient temperature with cooling unit	optionally to +50 °C

KUKA smartPAD
Making robot operation really easy.

Touch screen. Graphics support. Flexible interaction. The more diverse the robots' abilities become, the greater the importance of intuitive user interfaces for their operation. The KUKA smartPAD brilliantly demonstrates on a large antireflection touch screen just how simple it can be. Intelligent, interactive dialogs provide the user with those operator control elements that are currently required. This makes work easier, faster, more efficient, and simply smarter all-round.

Simple, intuitive operator control via touch screen

Ergonomic 6D mouse

_Integrated USB connection

_Antireflection touch display

_Universal application

_Hot-pluggable

_Ergonomically optimized

_Haptic jog keys

Universal application. Operate all KUKA robots and KR C4 controllers with the KUKA smartPAD.

Antireflection touch display. Simple operation via the well-lit 8.4" screen with an intuitive user interface.

Ergonomically optimized. Designed to be user-friendly. Built for mobility and its lightweight, just 1,100 g.

Hot-pluggable. If the KUKA smartPAD is not being used it can be simply unplugged during ongoing operation and used with any other KR C4 controller.

Integrated USB connection. Direct saving and loading of configurations now possible via USB port on the KUKA smartPAD.

Haptic jog keys. The combination of haptic jog keys and a haptically controlled mouse enables intuitive maneuvering with constant visual contact with the robot.

Weight	1,100 g

KUKA function and technology packages
for the KR C4

KUKA function and technology packages help you to solve specific automation tasks efficiently with minimum programming. KUKA's portfolio of software solutions cover nearly all common areas of application. Using these packages our KUKA system partners implement tailored solutions to meet every customer requirement.

KUKA function and technology packages

KUKA.WorkVisual	Engineering environment for all KUKA robots for system configuration, programming, data backup, diagnosis, and more.
KUKA.Load	Supports the evaluation of the load on a KUKA robot or the selection of a suitable robot for a given load.
KUKA.UserTech	Fast programming of motion and program sequences using freely definable buttons, input masks and parameter lists.
KUKA.ExpertTech	Faster, simpler programming even for non-experts in KRL code via menu-guided command selection.
KUKA.HMI Zenon	Creation of customized, application-specific user interfaces for visualization and operator control without programming knowledge. Display and operation using the touch panel and keys of the KUKA smartPAD.
KUKA.RemoteView	Allows remote access to the robot via a secure Internet connection, thereby offering the possibility of remote diagnosis or start-up support.
KUKA.VirtualRemotePendant	Allows the use of EtherNet communication to run the user interface of the KUKA smartPAD on an external PC and to operate the robot.
KUKA.RobotSensorInterface	Supports simple and flexible interfacing with sensors in the KR C4. It is also possible to integrate a number of channels with hard real-time requirements.
KUKA.VisionTech	"onBoard" vision system including image processing, camera and sensors. Extensive configuration options enable the flexible use of the robot in an unstructured environment.
KUKA.ConveyorTech	Organizes the cooperation of robots and conveyors. Allows efficient, dynamic handling of parts, even for complex applications.
KUKA.ForceTorqueControl	Takes account of process forces and torques exerted on the workpiece during machining, and controls and adjusts these as specified in the program sequence. In applications such as grinding, polishing, bending or even assembly, this technology package is an indispensable help.
KUKA.SafeOperation	Flexible programming of safe cooperation between humans and machines. Definition of safe workspaces, velocities, envelopes around robot tools, and cooperation with the operator.
KUKA.SafeRangeMonitoring	Beginners' tool for limiting and monitoring the safety and work areas of the robot. The monitoring and limitation of statically defined axis ranges creates an adequate degree of work safety for many applications.

KUKA function and technology packages

KUKA.Gripper & SpotTech	Programming of grippers and weld guns via easy-to-use inline forms for many industrial applications.
KUKA.ArcTech	For rapid start-up and simple programming of arc welding applications. The complete portfolio of option packages, in combination with sensors and sequence control, enables arc welding at the highest level.
KUKA.LaserTech	A modular, time-saving and easy-to-operate programming support package for laser cutting and laser welding. Both applications can be executed using the same robot – giving maximum flexibility as the workpiece needs to be clamped only once.
KUKA.ServoGun	Enables the operation of electric motor-driven spot weld guns with the KUKA robot controller. Various additional software options allow e.g. the elimination of mechanical gun compensation and other functions.
KUKA.GlueTech	Enables user-friendly programming of dispensing applications such as bonding, seam sealing or application of support seams using inline forms on the KUKA robot controller.
KUKA.RoboTeam	Coordinates and enables the high-precision interaction of a team of robots for handling a shared load or for working together on a moving workpiece.
KUKA.EtherNet KRL	Makes it possible to exchange data with external computers via the EtherNet interface. The robot can function here both as a client and as a server.
KUKA.OPC-Server	Basic technology for standardized data exchange between robots and external controllers for non-real-time information streams. Ideal for interfacing with external visualization and MES systems.
KUKA.PLC Multiprog	Programming environment for an extremely fast Soft PLC conforming to the IEC61131 standard. Expands the functionality of the KR C4 and offers virtually unlimited openness in the programming of automation cells and applications.
KUKA.PLC ProConOS	Runtime system of the KUKA.PLC Multiprog Soft PLC. PLC programs created with KUKA.Multiprog are run directly on the KR C4, with full access to the entire I/O system of the robot. Reading and processing of variables such as axis positions and velocity via function blocks.
KUKA.PLC mxA	Allows direct commanding and positioning of the robot by external controllers (Siemens®, Rockwell®, etc.). The user thus requires no knowledge of robot programming in the KUKA-specific robot language KRL.
KUKA.CNC	Complete software-based CNC implementation for execution of machine tool code (G-code) directly on the robot controller. This turns the robot, with its accuracy and stiffness, into a machining center for path-supported processes.
KUKA.Sim	The simulation programs of KUKA.Sim allow robotic cells to be planned with true-to-life accuracy.
